Opti-Lite[™]
ILLUMINATED SIGHT GLASS

R.W. McCollum Company, Your Authorized Local Dealer for Jikoh JDG-105 Ethanol Compatible Site Glasses, is proud to introduce Jikoh's latest innovation in the world of site glasses: The Opti-Lite Illuminated Site Glass.

That's right, illuminated site glasses!!! These new site glasses are powered by a super bright 12 volt LED light that draws only .12 amps and is rated for 100,000 hours of life expectancy. These lights can be run in conjunction with, or separate from, your trailer's unloading lights to give your driver much more visibility in monitoring fuel flow. The LED light is potted and sealed into the site glass with epoxy to prevent corrosion, and like the JDG-105's, these site glasses are 100% ethanol compatible!!!

It is recommended that these lights should only be illuminated during the unloading of your trailer. With this in mind, a simple toggle switch can be installed to operate the LED lights when needed. Furthermore, due to the fact that these lights require such minimum amperage, they can simply be tied into your existing running light wiring. No further wiring required!!!

The new Opti-Lite illuminated site glasses are available on both new Heil trailers, and for retro-fit applications. Please contact a representative with R.W. McCollum Company to get a quote on the new Opti-Lite site glasses today!!!
